Installation and Maintenance Instructions

These instructions are for reference only. For product-specific instructions, which may vary, please refer to the documentation supplied with your order.

IMPORTANT: All wiring connections must be made before applying power.

-  Refer to instructions/product supplied
-  Do not stare at the operating light source
-  This product should not be disposed of in your general waste
-  Please retain these instructions for future reference

-  Class III - Extra Low Voltage
- IP66** Dust tight and protected against powerful jets of water.
- t_a 35°C** Rated maximum ambient temperature
- CE** European Conformity
- UKCA** UKCA (UK Conformity Assessed)

Electrical Supply

Installation must be carried out by a suitably qualified electrician following current building and wiring regulations of the region of installation. 230/240V AC 50/60Hz mains supply to a suitable SELV LED Driver.

Site conditions: LED equipment is more susceptible to static damage and over voltage than previous technology. Before handling or connecting to the mains supply ensure that all Stoane Lighting (SL) products are protected from static discharge and that the mains supply is to regulation. (230V +10 -6%)

Refer to the fitting label for the module version and total wattage.

Module information;
For module information, including supply current/voltage please refer to the product label or the instructions supplied with your product.

The energy efficiency class of the LED is available in the instructions supplied with your fitting.

Mains cables must be double insulated, strain relieved and separated from E.L.V output cables.

Observe polarity:
Positive (+) is marked as RED.
Incorrect supply or reverse polarity can cause irreparable damage.

All connections must be made before applying power. If the supply is energised prior to making the connections to the fitting then the resulting surge will damage the LED.

Multiple LEDs should be wired in series, refer to driver instructions for minimum/maximum load.

The entire dimming control circuit source must be of SELV insulation class.

SL can provide assistance on dimming compatibility or control systems by request. For advice on specific dimming systems we recommend seeking assistance from the commissioning engineer or the control systems provider in the first instance.

The IP rating stated is applicable only when the fitting has been installed as per these instructions.

Care must be taken when handling any ingress protection seals, glands or "O" rings to ensure they are kept clean, unblemished and replaced exactly in their required location and suitably fastened home.

Wherever strain relief or ingress protection is provided by a radial compressed polymer ring, it should be checked annually and tightened further in the event that the insulation layer or seal that it compresses against has become brittle or "crept" over time.

Maintenance:

All lighting equipment is delicate and easily damaged through misuse or inappropriate installation (mechanical or electrical). Repairs and replacements may cause delays and will be chargeable. Contact SL for support if required.

All Stoane Lighting products are covered by a five year Warranty and a 25 year Duty of Care. Products are designed to be upgraded, adapted and refreshed using our comprehensive ReNew service. For more information on our ReNew service and for full Warranty terms and conditions visit stoanelighting.com or contact us at the address shown.

When supplying digital equipment with the potential to be connected to networks, physically or wirelessly (i.e. Bluetooth, WiFi, DMX radio etc.), SL does not take responsibility for the digital security of the equipment or associated networks. It is the customer's responsibility to select a protocol suitably robust for their requirements and to ensure responsible utilisation of passwords.

The light source contained in this luminaire shall only be replaced by the manufacturer, their service agent, or a similar qualified person.

If the external flexible cable or cord of this luminaire is damaged, it shall be exclusively replaced by the manufacturer or his service agent or a similar qualified person in order to avoid a hazard.

Disassembly Information is available on the technical section of our website and is accessed by entering your product serial number. Serial numbers are typically located in an area that is not visible when the fitting is installed.

Cleaning:

Fully isolate the fitting and allow to cool.

Clean the fitting with a slightly damp lint free cloth from a mild solution of soap and water. The fitting must be completely dry before reconnecting power.

Incompatible or abrasive chemicals can damage the fitting, contact SL for advice if required.

Installation

Check that the mounting surface is suitable for the installation of this fitting. **Fitting Weight : 0.1kg.**

Installation must be performed by a qualified person.

A suitable hole will be required in the mount surface if the cable exits through the base.

- Step 1 Using two suitable fixings, screw the fitting to the surface.
- Step 2 Make mains connections to SELV LED driver and extra low voltage connections to the fitting.

Ensure supply driver and connectors are housed indoors OR in a suitably IP rated enclosure. Cable ends must be suitably waterproofed. Inspect supply cables before installation to ensure there is no damage which will allow water to enter the fitting.

Flexible wiring connected to this luminaire shall be effectively routed, buried or secured to avoid a hazard. Buried cable should be appropriately protected against accidental damage.

After opening the sealed portion of the luminaire for any reason, SL recommends running the fitting for 15 minutes with the lid open to expel moisture before closing it up. This will prevent condensation on the lens and protect the fitting from corrosion.

This product is for industrial/professional use only and not intended for use by consumers.

WARNING: Do not look at exposed LED lamps in operation. Eye injury can result.

STOANE LIGHTING

EQUIPMENT DESIGN + MANUFACTURE

ADJUSTMENT

Using the supplied 1.5mm Allen key, the tilt and pan can be unlocked and adjusted.

When locking take care not to overtighten, the fixings should be tightened until the fitting is just locked.

OPTIC CHANGE

To change the optic, unscrew the front bezel and remove the black optic holder.

The optic can be pushed out of its holder and replaced by another 20mm optic from Stoane Lighting.

To replace the optic place the new optic into the optic holder. Replace the optic holder in the tadpole body being sure to line the pins of the holder up with the slots on the LEDs circuit board.

Once in place fully tighten the bezel to close the fitting.

Certified

Stoane Lighting firmly believe that we have a responsibility as environmental custodians, we believe that lighting equipment should be built to last, to be repaired and to be reused. As a BCorp we have pledged to operate a business not aiming to just be best in the world but a business best for the world. Stoane Lighting believe that the circular economy is a fundamental aspect of how we approach the challenges we face. If you read this at the end of the product life we encourage you to consider how you can ensure this product sees an extended life. If removal is unavoidable, please see the disassembly note below.

All Stoane Lighting products are supplied with a 5 year warranty and a 25 year duty of care.

Stoane Lighting operate a ReNew division, which can take your existing fittings and refurbish or upgrade without the need for replacing what you already have.

Through the ReNew service, Stoane Lighting provides general repair, deep cleans and electrical safety checks on luminaires, as well as possible repainting if needed. We will replace components that are nearing end of life, such as drivers, LEDs, and optics. If the fittings are to be used in a new area, or the existing space is undergoing a change in use, ReNew can offer a different mounting method or light technical performance (such as colour tuning), if needed, alongside the addition of on-board wireless control. ReNew as a service, depending on location, can be done on site or by returning equipment to Stoane Lighting.

Once fittings have been repaired or upgraded through ReNew, they will start a new five-year warranty period, and any unwanted parts will be recycled.

Product Disassembly and Component Recycling - While every effort has been made to ensure that our products are built to last and are ReNewable, there may come a point when, as a very last resort, the fittings need to be recycled. The Stoane Lighting website will provide information on how the fitting can easily be disassembled into its component parts for more effective recycling. Information on recycling services in your local region can also be supplied on request.

For more information on the above please visit stoanelighting.com or contact us at the address shown.

TADPOLE SNOOT (Optional)

The snoot (if supplied) can be fitted as required with the supplied M3x4 grub screw.

Series Wiring

SUPPLY

Installation must be carried out by a suitably qualified electrician following current building and wiring regulations of the region of installation. 230/240V AC 50/60Hz mains supply to a suitable SELV LED Driver.

Mains cables must be double insulated and strain relieved.

Observe polarity:
Positive (+) is marked as RED.
Incorrect supply or reverse polarity can cause irreparable damage.

All connections must be made before switching on mains.

Ensure supply driver and connectors are housed indoors OR in a suitable IP rated enclosure.

Ensure LEDs are connected in 'series' as shown below to the LED drivers.
